SUSPENSION

innovate design win

BH40

Incredible absorbing power.

Its absorbing power allows us to use a hydraulic setting softer in the dampers and same for leaf springs to gain in comfort, grip and traction.

In case of big jumps or high impacts, this hydraulic stop prevents the truck to go metal to metal. This results in better performance of the truck, lifetime extension of the mechanical parts, and less fatigue for the drivers, pilots and mechanics.

This hydraulic stop has been used in trucks of 5 to 20 tons.

Specifications

- Stroke: 100mm
- Donerre specific anti-leakage system
- Ø 40mm rod
- Hardened chromium-plated steel rod
- Ø 70mm spool
- Hydraulic rebound stop
