STEERING

In order to filter uncontrolled movements of the steering wheels, Donerre developed this new put away product.

This new put away steering damper use „through rod“ technology which allows to have the same damping force in two ways. It has a setting that lets you to increase or decrease simultaneously the damping force in both directions.

This product was developed to collect major efforts on the rally vehicles such as trucks with large wheels and a lot of steering movements that disrupt the reading of the track and control. With this damper steering movements are attenuated for better steering precision, a gain of performance and safety.

Damping adjustment

Specifications

- Damper rod hardened and chromed $\varnothing 22$
- Body and piston aluminum made $\varnothing 45$
- Double Donerre sealing system
- Damping adjustment
